Lab Exercise 20

App Deployment Using ECS And ECR

Name- Misha

Batch-2

SAP ID- 500119679

Step 1: Create ECR Repository

- Go to AWS Console
- Search **Elastic Container Registry (ECR)**
- Click **Create Repository**
- Give name (example: my-web-app)
- Click **Create**

Step 2: Configure aws

Create access key

```
C:\Users\hp>aws configure
AWS Access Key ID [****************SR2E]: AKIARONSQQITOGVOEY7D
AWS Secret Access Key [****************I49u]: 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
Default region name [us-east-1]:
Default output format [json]:

C:\Users\hp>
```

Step 3: Authenticate Docker to ECR

Run this :

```
aws ecr get-login-password --region ap-south-1 | docker login --username AWS --password-stdin 099695493670.dkr.ecr.ap-south-1.amazonaws.com
```

```
C:\Users\hp>aws ecr get-login-password --region ap-south-1 | docker login --username AWS --password-stdin 099695493670.dkr.ecr.ap-south-1.amazonaws.com
Login Succeeded

C:\Users\hp>
```

Step 4: Build Docker Image

Run this :

```
docker build -t devops-ecr .
```

```
=> => transferring dockerfile: 93B                                                                                    0.0s
=> [internal] load metadata for docker.io/library/httpd:latest                                                       10.9s
=> [auth] library/httpd:pull token for registry-1.docker.io                                                           0.0s
=> [internal] load .dockerignore                                                                                       0.4s
=> => transferring context: 2B                                                                                         0.0s

=> exporting to image                                                                                                  0.1s
=> => exporting layers                                                                                                 0.1s
=> => writing image sha256:af22f887c7af5788a8ae5e64408980692db46e836eba1fbea20d4ccc28b819687                           0.0s
=> => naming to docker.io/library/devops-ecr                                                                           0.0s
```

Step 5: Tag Docker Image

Run this :

```
docker tag devops-ecr:latest 099695493670.dkr.ecr.ap-south-1.amazonaws.com/devops-ecr:demo
```

Step 6 : Push Docker Image

Run this :

```
docker push 099695493670.dkr.ecr.ap-south-1.amazonaws.com/devops-repo:latest
```

Step 7: Create Cluster

1. Go to ECS
2. Click **Create Cluster**
3. Select **Fargate (Serverless)**
4. Cluster Name: devops-cluster-new
5. Click Create

Step 8: Create Task Definition

1. Launch Type → Fargate
2. Container Image → Paste ECR URI

Step 9 Create Service

1. Go to Cluster

2. Click **Create Service**

Step 10: Turn on all traffic in security broke

Step 11 : Verify Deployment

1. Go to Load Balancer
2. Copy DNS Name
3. Paste in Browser

http://3.82.48.11/
